

Discovering Psychology, The Science of Mind

3rd Edition, AP® Edition

Presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties.

Explores seven integrative perspectives:

- Biological
- Evolutionary
- Cognitive
- Developmental
- Clinical
- Social / Social Neuroscientific
- Personality / Individual Differences

Psychology as a Hub Science broadens the discussion of a topic to include ways in which psychology is engaged in cooperative science with other disciplines.

The writing and features are smart and engaging, and consistently illustrate the benefit of using multiple perspectives within psychology. Cacioppo and Freberg offer the best science possible, including exciting new research findings likely to expand students' understanding of psychology as a scientific field of study.

Discovering Psychology will offer MindTap *Cengage's new immersive, personalized online learning environment where students can:*

- Interact with the text and multimedia
- Receive immediate feedback from auto-graded quizzes
- Check their understanding
